

**YOU'RE GETTING
A SMART METER**

Technology is advancing in every area of our lives, and soon you'll benefit from digital technology that will help bring you cleaner, safer, more reliable energy. This new technology is part of the next generation of our energy grid — the advanced grid — which will help us serve you better. The first step? Exchange your existing electric meter with a smart meter at your home.

In about two months, Xcel Energy will exchange your current electric meter with a smart meter to improve reliability, efficiency and security. Your smart electric meter will enhance the service we deliver to you and provide you with access to detailed energy usage information and pricing plans that can maximize your savings.

With the advanced grid, you will have improved reliability and faster outage restoration if there is a power outage. New digital energy grid technologies enable power to be automatically re-routed to shorten or minimize service outages. You will get more of what you expect from Xcel Energy – clean, reliable energy and new ways to save money, as we work to deliver our vision of 100% carbon-free electricity by 2050.

We'll replace your meter at:

Premise address 1
Premise address
City, CO

Premise address 2
Premise address
City, CO

Premise address 3
Premise address
City, CO

In the next few weeks, you will receive more information about the meter installation process and what to expect. The meter installation will take about 15 minutes and will be at no direct cost to you.

Visit [xcelenergy.com/SmartMeter](https://www.xcelenergy.com/SmartMeter) to learn how to opt out and the fees associated with opting out of a smart meter. Please note that if you have already opted out of your smart meter, we will exchange your existing meter with a non-communicating meter.
